(54) METHOD AND DEVICE FOR SERVICING PATENT SEARCH**(57) Abstract:**

PURPOSE: A method and device for servicing a patent search is provided to append comments of a patent specialist to a searched patent and to supply the comments to a service requesting person.

CONSTITUTION: A control unit receives a search keyword for a precedence patent search through an input unit(S900), and searches a patent publication report storing unit by the inputted keyword and searches a precedence patent related to the search keyword(S902). The control unit displays the searched precedence patent through a display unit(S904). The control unit decides whether a comments writing requesting signal is inputted to the displayed precedence patent(S906). If a comments writing requesting signal is inputted, a comments writing screen to the searched precedence patent is displayed through the display unit(S908). Comments are received from a terminal user through the comments writing screen and stored in a search result storing unit with the searched precedence patent(S910). The control unit displays the precedence patent including the comments through the display unit(S912).
